Qoveliqo Ads — Google Ads API Design Document

Overview

Qoveliqo Ads is an internal product research and Google Ads management tool built by Veliqo. It uses the Google Ads API to automate product research and campaign performance monitoring for our own Google Shopping / Performance Max campaigns.

Company Information

Company Name	Veliqo
Website	goveliqo.com (brand: Veliqo)
Client Account	143-564-5968 (Blue Ocean Commerce)
Tool URL	https://web-production-88d0.up.railway.app

Business Model

Our company operates an e-commerce store selling consumer products online at goveliqo.com (brand name: Veliqo). We advertise exclusively for our own store using Google Shopping and Performance Max campaigns. We do not manage ads for any third parties.

Tool Access / Use

Qoveliqo Ads is an internal dashboard used only by our team. It automates keyword research, monitors campaign performance, and adjusts budgets based on ROAS targets. No external parties have access to the tool. The tool is hosted at https://web-production-88d0.up.railway.app

Tool Design

The tool pulls performance metrics from the Google Ads API into a local data store (Google Sheets). Our Streamlit-based dashboard displays campaign performance reports, keyword research data, and product economics. Users can view performance by campaign, product, and country over configurable time periods.

We run automated checks every 2 hours to pull campaign metrics and make budget decisions:

- Pause underperforming campaigns (spend exceeds kill threshold with no conversions)
- Scale winning campaigns (increase budget by 20% when ROAS exceeds target for 2+ consecutive days)

API Services Called

1. Keyword Planner (KeywordPlanIdeaService)

Purpose	**Retrieve search volume, CPC estimates, and competition data for product-intent keywords**
Method	GenerateKeywordIdeas
Frequency	~1-2 times per day, batches of 20 keywords per request
Data Used	avg_monthly_searches, competition_index, low_top_of_page_bid_micros, high_top_of_page_bid_micros

2. Campaign Performance (GoogleAdsService)

Purpose	**Pull performance metrics for our Performance Max campaigns**
Method	Search (GAQL queries)
Frequency	Every 2 hours
Metrics Retrieved	clicks, impressions, cost, conversions, conversion_value — segmented by campaign name and date

3. Campaign Budget Management (CampaignBudgetService)

Purpose	**Adjust daily budgets for winning campaigns based on ROAS performance**
Method	MutateCampaignBudgets
Frequency	At most once every 3 days per campaign
Logic	Increase budget by 20% when ROAS exceeds target for 2+ consecutive days

Tool Screenshots

Below are screenshots of our live dashboard showing the Performance and Products views. The tool is accessible at https://web-production-88d0.up.railway.app
